

# Digital Health Catalogue

Our highly qualified team of experts is here to support you with the following digital health tools and services:

## eConsult

Enables primary care providers and nurse practitioners to send a secure email message to a specialist or a specialty group, and can be used to request treatment options, ask for advice or ask if a referral is needed

## Virtual Visits

Enables providers to 'see' their patients over a secure, online communication system via chat messaging, phone or video, reducing avoidable in-person visits and improving satisfaction for providers *and* their patients

## Tablets

Enables efficient screening, assessment and information management of a patient population, with information collected from the patient through a tablet in the waiting room and integrated directly into the provider's electronic medical record (EMR)

## ePrescribing

Enables prescribers to create and send prescriptions electronically to a patient's pharmacy of choice, and is seamlessly integrated into a provider's EMR

## EMR coaching & tools

Coaching sessions help providers enhance their use of digital health technologies in clinic — EMR templates and other tools provide clinical decision support and improve data quality, leading to enhanced outcomes for patients

## Electronic Referral (eReferral)

Enables providers to send standardized referral forms seamlessly and quickly direct from their EMRs to specialists and programs, as well as receive updates regarding the status of the referral

## Electronic Health Record (EHR) tools

Enables providers to access critical patient information in real-time at the point of care from acute care hospitals, home & community care services, plus various provincial data repositories

## Intelligent Automation tools

Supports providers with tools that run 24/7 in the background of health information systems to automate manual tasks, improve data quality and enable the secure sharing of information across the continuum of care
