

Meet our newest virtual assistant!

The eCE Automates team at the eHealth Centre of Excellence has launched a new bot process that will help primary care clinicians to seamlessly and efficiently document their patients' COVID-19 vaccinations within their electronic medical records.

BENEFITS:

- Ensures your patients' immunization records are up-to-date
- Replaces a tedious and time-consuming manual process
- Enables you to place your focus where it needs to be – on delivering high quality patient care

HOW IT WORKS:

The bot runs a list of searches/algorithms to produce a list of patients, and then opens the record for each patient on the list. The bot then locates the patient's HRM COVaxON vaccination report in the patient's chart, confirms COVID-19 vaccine details and automatically updates the CCP immunization section of the patient's chart.

We're here to support you during this challenging time and are offering this virtual assistant at no cost to you or your clinic.
