

## Our virtual assistant can support you with documenting COVID-19 vaccinations – quickly and efficiently

The eCE Automates team at the eHealth Centre of Excellence has launched a new bot process for **Bernie** that will help primary care clinicians to seamlessly and efficiently document their patients' COVID-19 vaccinations within their electronic medical records.

### BENEFITS:

- Ensures your patients' immunization records are up-to-date
- Replaces a tedious and time-consuming manual process
- Enables you to place your focus where it needs to be – on delivering high quality patient care

### HOW IT WORKS:

The bot runs a list of searches/algorithms to produce a list of patients, and then opens the record for each patient on the list. The bot then locates the patient's HRM COVaxON vaccination report in the patient's chart, confirms COVID-19 vaccine details and automatically updates the CPP immunization section of the patient's chart.

**We're here to support you during this challenging time and are offering this virtual assistant at no cost to you or your clinic.**
