

Development and Validation Process – eReferral Form

The rigorous eForm development and validation process has resulted in the production of high quality, standardized electronic referral forms that meet the referral sites' clinical requirements and needs.

eReferral New Forms Development Process

Quick Facts

- Over **380** eReferral forms have gone through this process and include a minimum dataset, standardized data fields where possible, and validated data outputs.
- Forms have been developed for **over 40** different specialty services.
- All **57** Diagnostic Imaging eForms include embedded best practice decision support guidelines.

What we are hearing from clinicians about their forms building experience (n=24)

- **92%** of providers were satisfied with the eReferral forms developed for their clinics.
- **95%** of providers found the eReferral form to be of high quality.
- **91%** of providers believe the new eReferral form would result in receiving more complete and appropriate referrals.
